

Desigualdades de Bell em Mecânica Quântica

Silvio Paolo Sorella

Prof. Titular IF-UERJ

Content

- 1) Product and entangled states: the example of the spin 1/2 states.**
- 2) Bell's states**
- 3) Bell's dichotomic operators.**
- 4) The Bell-CHSH inequality**
- 5) Tsirelson's bound**
- 6) Gisin theorem for pure states. Check of Gisin's theorem**
- 7) Generalization pf the Bell-CHSH inequality to spin 1**
- 8) Spin j particles: the pairing mechanism. Odd and even spin**
- 9) Bell-CHSH for continuous variables. The case of the momentum and of the coordinate. Weyl operators. Weyl algebra. Bell's gaussian state. Violation of the Bell-CHSH inequality.**
- 10) Bell-CHSH inequality for Infinite dimensional Hilbert spaces: Harmonic oscillator. Fock space. Pseudo-spin operators.**
- 11) NOON states**

12) Coherent states in Quantum Mechanics. Properties and applications. Displacement operator and its algebra

13) Coherent entangled states.

14) Schroedinger cat's states

15) Squeezed states. Entanglement and Bell-CHSH violation

16) Squeezed states and Bogoliubov transformations

17) Inequalities for multipartite systems: the Mermin inequalities.

18) GHZ (Greenberg-Horne-Zeilinger) states and maximal violation of the Mermin inequality

19) Entanglement and mixed states

20) The PPT criterion

21) The Werner states
